

Full content search always accessible (when enabled by admin)

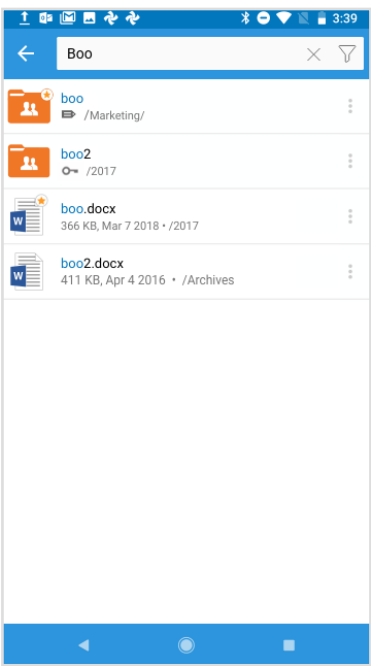

Search icon triggers keyboard - and blinking cursor - Filters can also be accessed

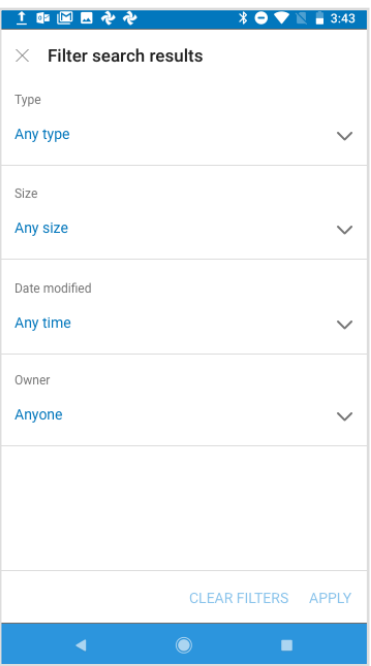

X appears as soon as data is added (clears current input)

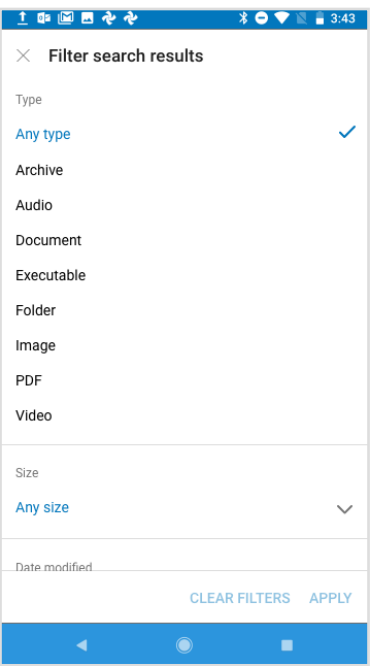

Default loader

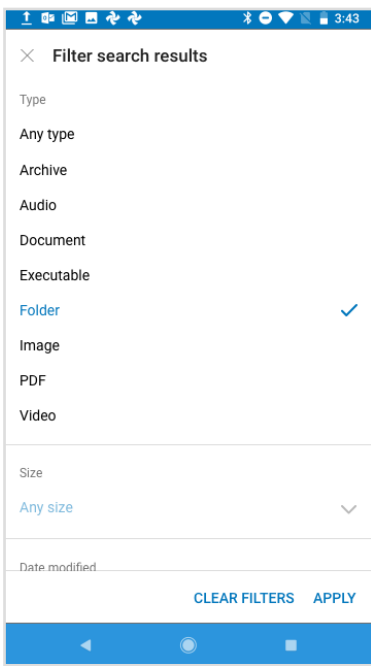

Results view (unfiltered)
Search criteria is highlighted - Normal Actions available for files / folders via vertical ellipses. If file is selected it directly opens in default viewer or editor. Exiting or back button from editor returns to search results.

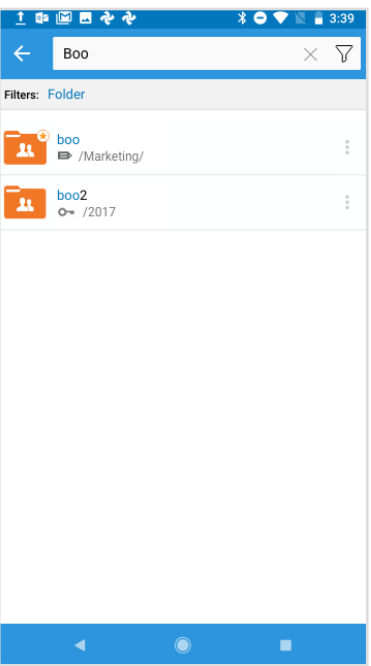

Default 1st view of filters
Clear and apply are disabled

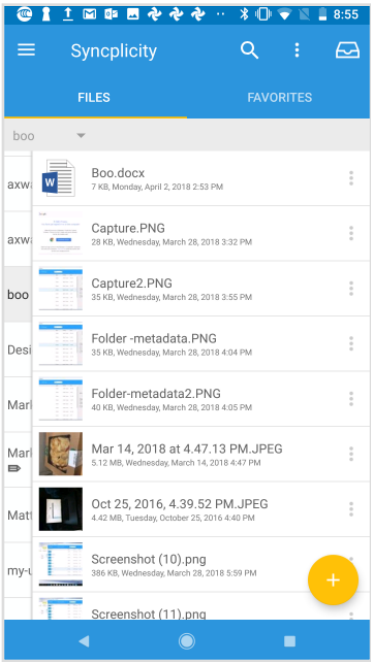

Opening any category shows the default selected

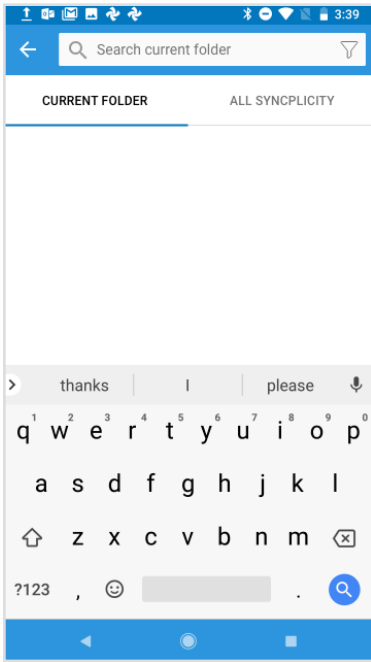

Changing setting enables clear and apply
Clicking clear returns settings to default and leaves filters view showing - Clicking apply goes straight to results—>

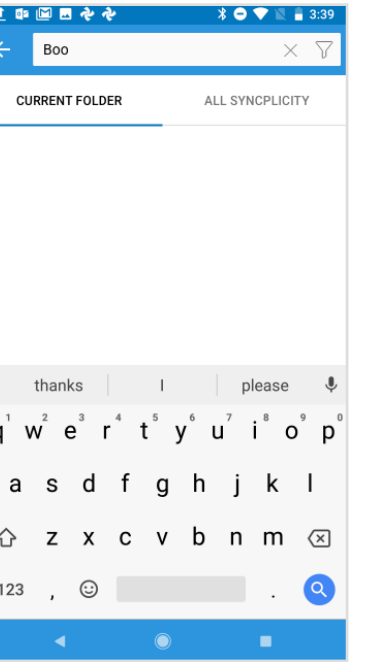

Filtered results shown - Active filter(s) are displayed in new row btw search box and results

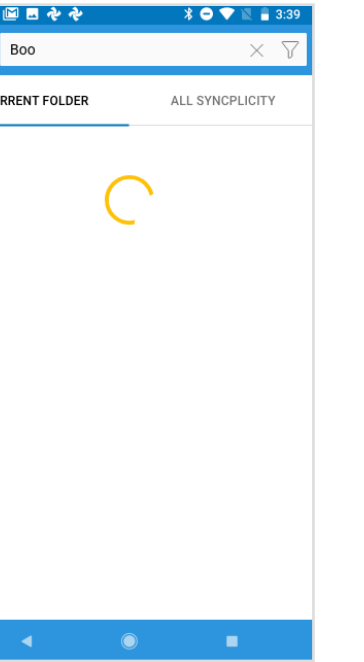

First result selected (a folder) - goes to normal folder view - clicking OS soft back button returns user to results screen (same results and filters applied)

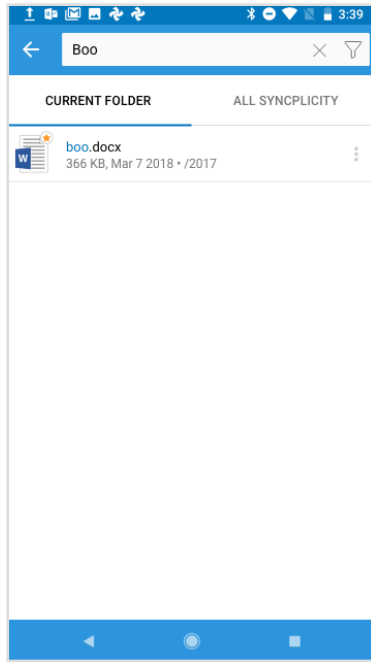

Global search triggered from a nested folder. Current folder is default selection. Keyboard pops up and blinking cursor in search box...

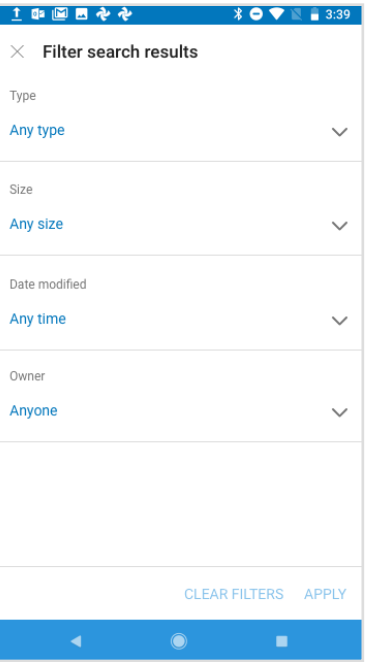

string entered in input field

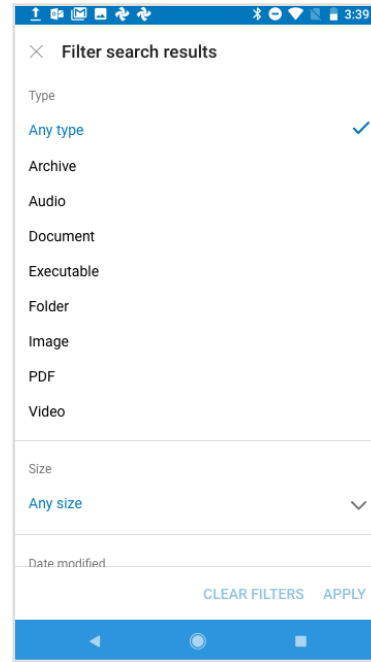

Default loader

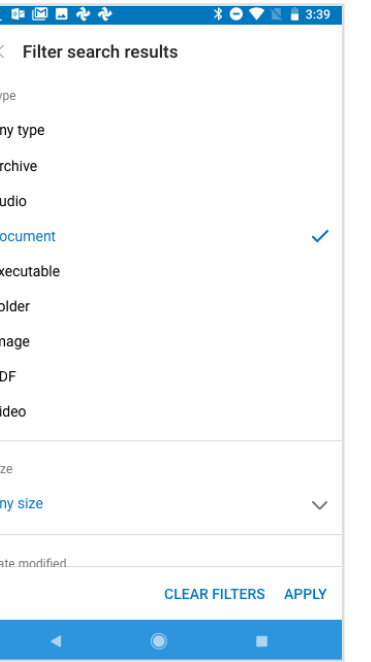

Results in current folder

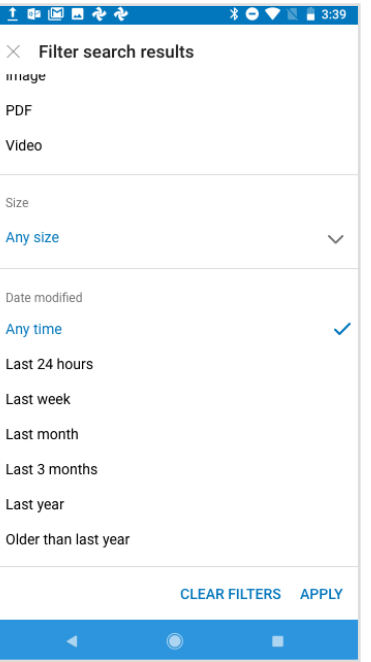

Filter triggered

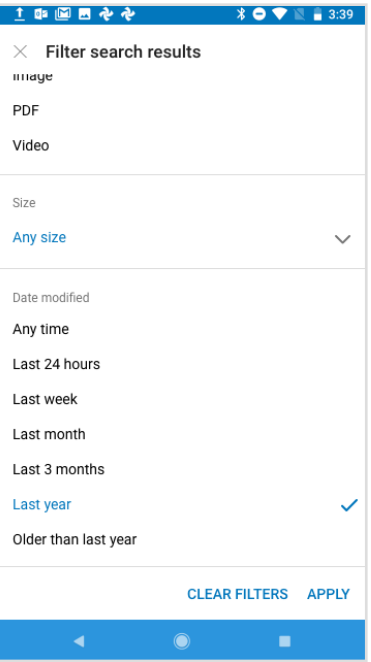

Type filter opened up

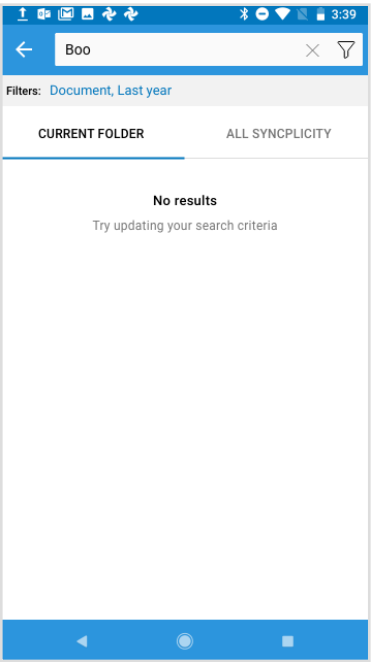

Type changed to Document

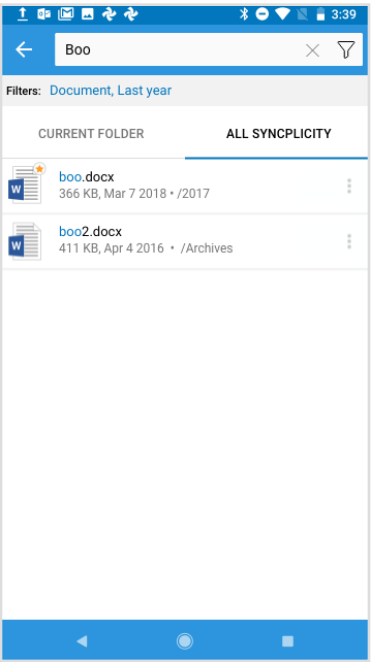

User scrolls down slightly and selects Date modified - options auto center on the view

Last year selected - then user hits apply

Applied filters shown - no results message

New results after user switches to ALL
